

# E-CARE

## Android App

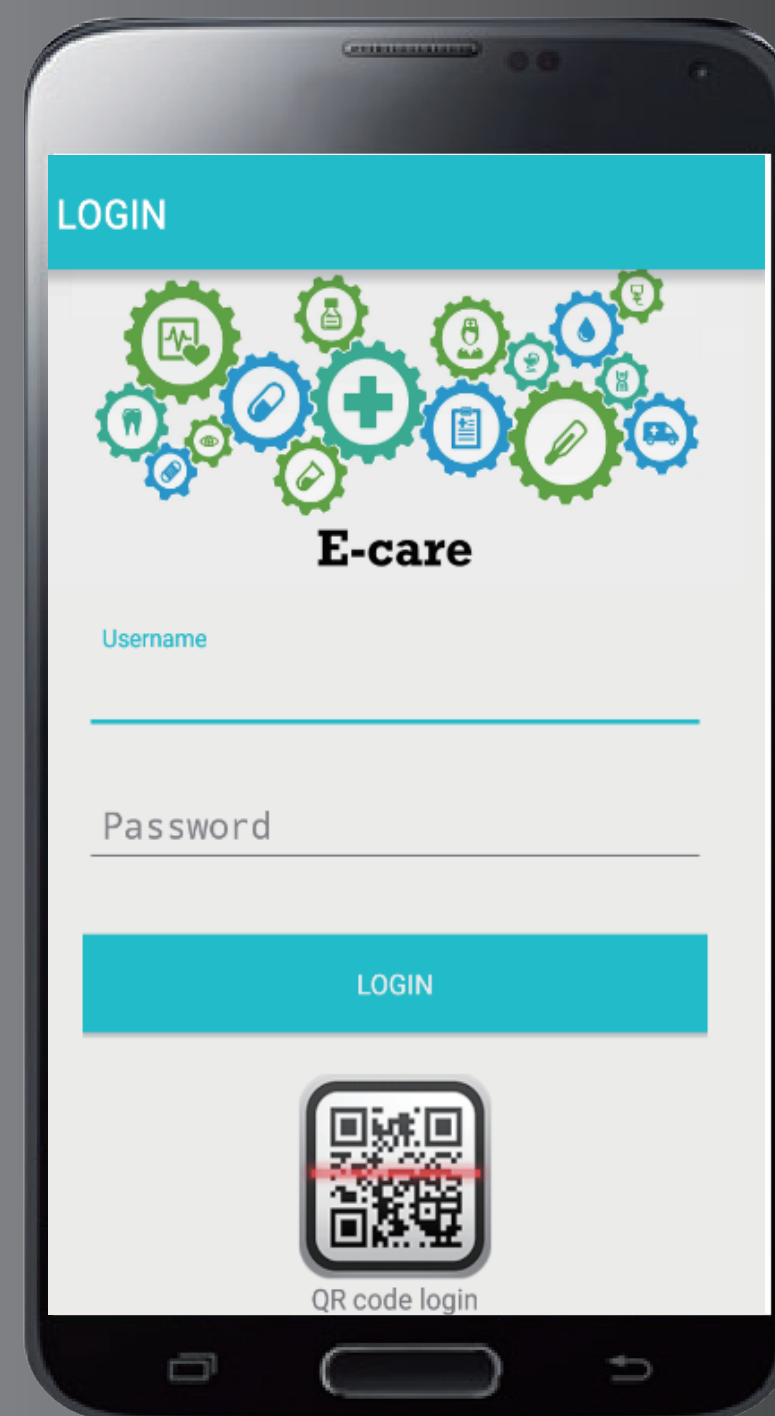

**E-care is simply a communicating platform for the patients and health care group.**

**With E-care, patients can make appointment in advance.**

**With E-care, patients do not need to wait fetching the medication for long.**

**With E-care, patients can receive reminder to take medicine on time.**

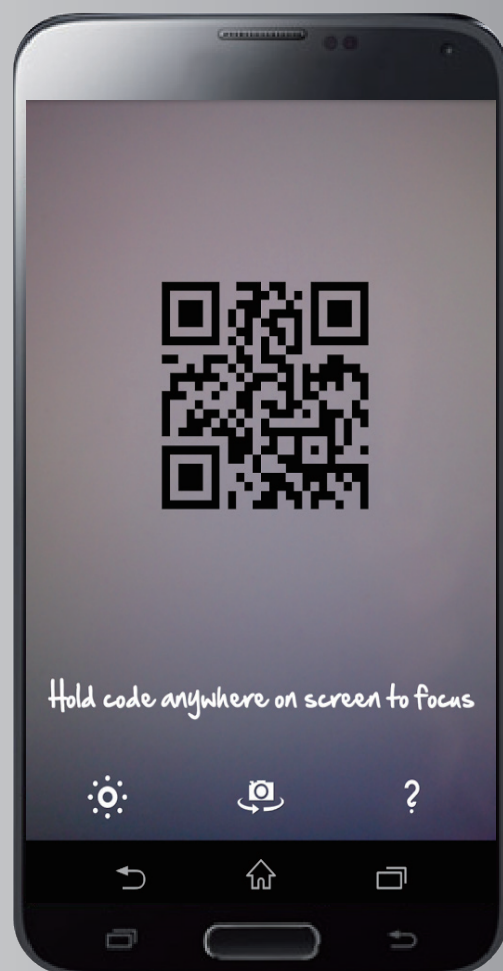

**With E-care, patients can report any side effects encountered while taking the medication and get advice from health care group remotely.**

### QR code login

**There are mainly two types of accounts such as the patients and health care group.**

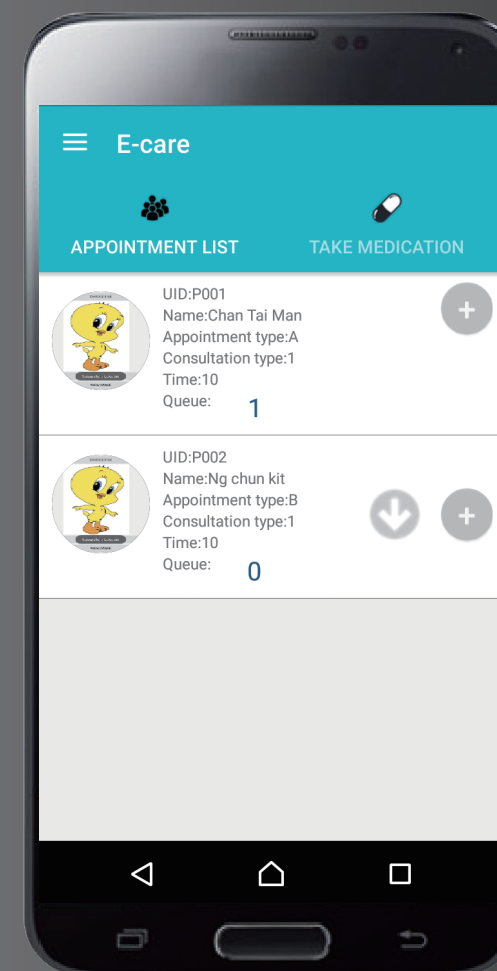

**Members of health care group will help patient to create an account and then give QR code for them to scan and login in their own .**

### Appointment management

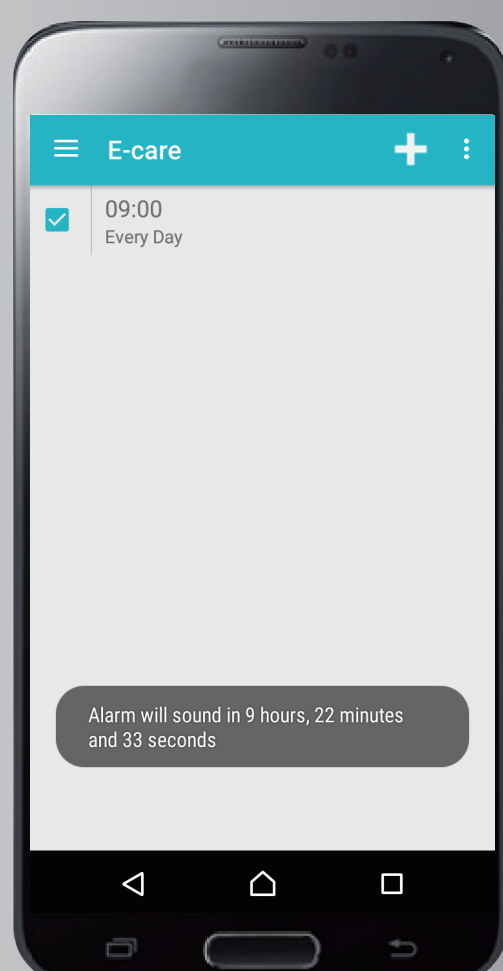

**Patients can have a booking with health care group before they come to the connected clinic or hospital.**

**For the patient with appointment, E-care will send a SMS reminder for them if it is soon for their turn.**

### reminder of taking relevant medication

**E-care would provide a alarm for them when time is reached to take the relevant medicine.**

### Report system for side effect

**Patients have the option to report any side effects encountered while taking the medication and rate it as urgent, major or minor discomfort.**

**The health care group gives immediate responses and advices.**
